

Grade 7 Social Studies (Geography)

Social Studies Curriculum Framework

Revised 2014

Grade 7 Social Studies

Course Focus and Content

In Grades K-6, students develop skills and foundational knowledge in geography as well as civics, economics, and history. Grade 7 Social Studies provides a study of both physical and human geography of the world through a geographic lens. As students study the continents and regions across the globe, they will learn about the historic, cultural, economic, and political development as well as interconnections that occur in both human and physical systems of each area. During this study, students will develop the perspective of a global citizen, understanding that global-scale issues and problems are resolved through extensive collaboration among the world's peoples, nations, and economic organizations. Geographic inquiry helps students understand and appreciate their own place in the world and fosters curiosity about Earth's wide diversity of environments and cultures. Geography requires using spatial and environmental perspectives, asking and answering questions about global interconnections and spatial patterns, and applying geographic skills and tools. Creating maps and other geographic representations promotes the inquiry process and can be useful in making decisions and solving problems. This course helps students understand that thinking geographically requires knowing that the world is a set of complex ecosystems interacting at multiple scales that structure the spatial patterns and processes influencing our daily lives.

Skills and Application

Throughout the course, students will develop and apply disciplinary literacy skills: reading, writing, speaking, and listening. As students seek answers to compelling and supporting questions, they will examine a variety of primary and secondary sources and communicate responses in multiple ways, including oral, visual, and written forms. Students must be able to select and evaluate sources of information, draw and build upon ideas, explore issues, examine data, and analyze events from the full range of human experience to develop critical thinking skills essential for productive citizens. Grade 7 Social Studies is required by the Standards for Accreditation.

The acquisition of content knowledge and skills is paramount in a robust social studies program rooted in inquiry. The chart below summarizes social studies practices in Dimensions 1, 3, and 4 of The College, Career, & Civic Life C3 Framework for Social Studies State Standards. These practices should be addressed throughout Grades K-12, building as students acquire the skills. Dimension 2 sets forth the conceptual content, and the alignment to this dimension is embedded in the student learning expectations (SLEs).

Dimension 1 – Questions	Dimension 3 – Sources and Evidence	Dimension 4 – Communicating Ideas
1. Construct compelling questions that promote inquiry around key ideas and issues	4. Gather relevant information from multiple perspectives and a variety of sources; evaluate the credibility of the source by determining its relevance and intended use	6. Construct arguments and explanations that convey ideas and perspectives to appropriate audiences using print, oral, and digital technologies
2. Develop supporting questions that contribute to inquiry: identifying facts, concepts, and interpretations	5. Use evidence from multiple sources to answer compelling and supporting questions by developing arguments with claims and counterclaims and providing explanations	7. Critique the credibility, relevance, and use of evidence in arguments and explanations proposed by self and others
3. Answer compelling and supporting questions using appropriate and available sources that consider multiple points of view		8. Use disciplinary lenses within the social sciences to understand local, regional, and global problems, proposing solutions or assessing strategies and options for action while applying deliberative processes
Engage in disciplinary thinking across the social sciences in Grades K-12		

Strand	Content Standard
World in Spatial Terms	
	1. Students will interpret spatial information using geographic representations.
	2. Students will analyze the spatial organization of people, places, and environments on Earth's surface.
	3. Students will analyze regions created through cultural, human, and physical characteristics.
	4. Students will apply geographic skills and tools to interpret the past, the present, and plan for the future.
Human Systems	
	5. Students will analyze the demographics and migration of human population and settlement over time.
	6. Students will evaluate the characteristics, distribution, and complexity of cultural regions.
	7. Students will analyze patterns and networks of economic interdependence among regions.
	8. Students will analyze causes and effects of cooperation and conflict among people.
Environment and Society	
	9. Students will analyze the interactions between humans and the environment.
	10. Students will evaluate patterns of change and continuity in the distribution and consumption of resources.

Glossary for Grade 7 Social Studies

Cultural characteristic	Specific idea, beliefs system, or pattern of behavior that characterizes a society or a culturally distinct social group (e.g., cultural characteristics are expressed in celebrations, national holidays, housing types, child-rearing methods, clothing styles, food preferences)
Cultural convergence	Tendency of certain societies to become more similar
Cultural diffusion	Spread of cultural elements from one culture to another
Cultural divergence	Tendency of certain societies to become less similar with time
Demographic	Concept or idea relating to the structure of populations; the factor by which population is broken down (e.g., birth and death rate, race, ethnicity, age, gender)
Factors of Production	Input used in the production of goods and services, including land, labor, capital, and entrepreneurship
Geographic representation	Any visualization depicting cultural traits or physical features across a defined geographic space (e.g., traditional maps, aerial photographs, remotely sensed images, topologically-integrated networks, or digitally-rendered spatial data in a geographic information system [GIS])
Geospatial technology	Computer hardware and software with which users analyze and represent geographic data at infinitely varied levels; includes technologies related to mapping and interpreting physical and human features on Earth's surface (e.g., global positioning systems, geographic information systems, remote sensing)
Place	Location having distinctive characteristics that gives it meaning and character and distinguishes it from other locations
Primary economic activity	Production of naturally existing or culturally improved resources (e.g., agriculture, ranching, forestry, mining, fishing)
Push- pull-factor	Social, political, economic, and environmental force that drives people away from their previous location to search for new ones – push-factor; Social, political, economic, and environmental attraction of new areas that draw people away from their previous location – pull-factor
Quaternary economic activity	Economic activity involving the collection, processing, and distribution of information (e.g., marketing; scientific research; information technology; advertising)
Region	Area with one or more common physical or cultural characteristics or features that give it a measure of homogeneity and make it different from surrounding areas
Secondary economic activity	Conversion of raw materials from the primary economic sector into finished industrial product (e.g., manufactured goods; oil refining; construction; ship building)
Spatial connection	Contact resulting in flow of ideas, information, people, or products among places
Spatial data	Information used to pose, analyze, and resolve problems about patterns on the Earth's surface that reflect physical and human processes
Spatial organization	Arrangement and positioning of various human and physical phenomena on Earth's surface
Spatial pattern	Systematic arrangement of various physical and human phenomena on Earth's surface
Sustainability	Method of using a resource so that the resource is not depleted or permanently damaged
Tertiary economic activity	Provision of services to the general population; service industries (e.g., banking, retailing, education, law enforcement, entertainment)
